D-Sub Receptacle Connector with 2 x Size 8 Opto-Electronic Contacts

Glenair 0500-3034 series of Active Opto-electronic connector offers customers the power to convert from electrical to fiber optic signals within a D-Sub receptacle connector to support high speed fiber optic transmissions in harsh environments. The 0500-3034 incorporate Size 8 active contacts in multiple configurations to enable optical Transmitters, optical Receivers, or Optical Transceivers. The opto-electronic performance parameters of the 0500-3034 are defined by the performance of the Size 8 contacts that are incorporated**. For example, if one incorporates a 4.25Gbps contact into the connector then each of the contacts will be 4.25Gbps capable.

The fiber optic signal that is generated within the 0500-3034 active connector is transmitted through an ARINC 801 fiber optic connector interface to a fiber optic cable system using a D-Sub plug connector that has been fitted with adapters to incorporate ARINC 801 fiber optic contacts. This allows for proper housing and retaining of contacts at the required optical interface to achieve very repeatable low loss optical transmission characteristics.

The 059-0001 adapter converts D-Sub Size 8 cavities (twinax, coax, or quadax) into ARINC 801 LuxCis fiber optic connectors. For more information, please refer to 059-0001 sales drawing.
