

DPX / AS81659
BACKSHELLS
FOR ARINC 404
RACK-AND-PANEL
CONNECTORS

Complete DPX / AS81659 backshell capability: solid, split-shell, environmental, non-environmental, EMI/RFI, strain relief and more.

AS 81659 split-shell EMI backshell with Qwik-Ty strain relief

Line Replaceable Units (LRUs) are incorporated into avionic racks in commercial and military aircraft. Installation and maintenance of avionic equipment is facilitated through the use of rack-and-panel connectors which mate and demate without the use of mechanical coupling. On the cable side, these rack-and-panel connectors are equipped with backshell accessories to address common environmental, electrical, and mechanical stress problems which can damage cables and cable-to-connector terminations. Glenair supplies the complete range of DPX / AS81659 (ARINC 404) connector accessories and backshells for cable strain relief, environmental sealing, and EMI/RFI shield termination.

Glenair Signature Series
